# **SAFETY INSTRUCTIONS**

This chapter contains important safety instructions that you must follow during operation and storage. Read the following before any operation to ensure your safety and to keep the instrument in the best possible condition.

#### Safety Symbols

These safety symbols may appear in this manual or on the instrument.

	Warning: Identifies conditions or practices that could result in injury or loss of life.	
	Caution: Identifies conditions or practices that could result in damage to the ASR-6000 or to other properties.	
4	DANGER High Voltage	
<u>(</u>	Attention Refer to the Manual	
	Protective Conductor Terminal	
$\mathcal{A}$	Earth (ground) Terminal	

Do not dispose electronic equipment as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased.

#### Safety Guidelines

General Guideline Do not place any heavy object on the ASR-6000.

Avoid severe impact or rough handling that leads to damaging the ASR-6000.

Do not discharge static electricity to the ASR-6000.

Use only mating connectors, not bare wires, for the terminals.

Do not block the cooling fan opening.

Do not disassemble the ASR-6000 unless you are qualified.

If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Power Supply	AC Input voltage range:	
	200 to 240 Vac ± 10% (3P3W) 380 to 415 Vac ± 10% (3P4W)	
	Frequency: 47 ~ 63 Hz	
	To avoid electrical shock connect the protective grounding conductor of the AC power cord to an earth ground.	
	The power switch that is included in the instrument is not considered a disconnecting device.	
	The permanently connected power input is used as the disconnecting device and shall remain readily operable.	
	a. A switch or circuit-breaker must be included in the installation	
	b. It must be suitably located and easily reached	
	<ul> <li>c. It must be marked as the disconnecting device for the equipment.</li> </ul>	
	d. It shall be located near the equipment	
	Do not position the equipment so that it is difficult to operate the disconnecting device.	
	Ask for professional technician for installation.	
	The ASR-6000 model shall be employed in rack- based applications and it shall not be connected to external cord directly. In addition, installation shall be done by a qualified person in accordance with local regulations. The ASR-6000 model is not to be used in standalone scenario.	
Cleaning the ASR- 6000	Disconnect the circuit-breaker or permanently connected power input before cleaning.	
	Use a soft cloth dampened in a solution of mild detergent and water. Do not spray any liquid.	
	Do not use chemicals containing harsh material such as benzene, toluene, xylene, and acetone.	

Operation Environment	Location: Indoor, no direct sunlight, dust free, almost non-conductive pollution (Note below)	
	Relative Humidity: 20%~ 80%, no condensation	
	Altitude: < 2000m	
	Temperature: 0°C to 40°C	
	(Pollution Degree) EN 61010-1:2010 specifies the pollution degrees and their requirements as follows. The ASR-6000 falls under degree 2.	
	Pollution refers to "addition of foreign matter, solid, liquid, or gaseous (ionized gases), that may produce a reduction of dielectric strength or surface resistivity".	
	Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.	
	Pollution degree 2: Normally only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation must be expected.	
	Pollution degree 3: Conductive pollution occurs, or dry, non- conductive pollution occurs which becomes conductive due to condensation which is expected. In such conditions, equipment is normally protected against exposure to direct sunlight, precipitation, and full wind pressure, but neither temperature nor humidity is controlled.	
Storage	Location: Indoor	
environment	Temperature: -10°C to 70°C	
	Relative Humidity: ≤90%, no condensation	
Disposal	Do not dispose this instrument as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased. Please make sure discarded electrical waste is properly recycled to reduce environmental impact.	

This chapter describes the ASR-6000 parallel model series in a nutshell, including its main features, operating area, accessories and front with rear panel introduction.

## ASR-6000 Parallel Models Series Overview

#### Series lineup

The ASR-6000 parallel models series consists of 5 models, which differ in various capacity. Note that throughout the user manual, the term "ASR-6000" refers to any of the models, unless stated otherwise.

#### **1P Output Condition**

Model Name	Power Rating	Max. Output Current	Max. Output Voltage
ASR-6450-09	9000 VA	90 / 45 A	350 Vrms / 500 Vdc
ASR-6600-12	12000 VA	120 / 60 A	350 Vrms / 500 Vdc
ASR-6450-13.5	13500 VA	135 / 67.5 A	350 Vrms / 500 Vdc
ASR-6600-18	18000 VA	180 / 90 A	350 Vrms / 500 Vdc
ASR-6600-24	24000 VA	240 / 120 A	350 Vrms / 500 Vdc

#### **1P3W Output Condition**

Model Name	Power Rating	Max. Output Current	Max. Output Voltage
ASR-6450-09	6000 VA	30 / 15 A	700 Vrms / 1000 Vdc
ASR-6600-12	8000 VA	40 / 20 A	700 Vrms / 1000 Vdc
ASR-6450-13.5	9000 VA	45 / 22.5 A	700 Vrms / 1000 Vdc
ASR-6600-18	12000 VA	60 / 30 A	700 Vrms / 1000 Vdc
ASR-6600-24	16000 VA	80 / 40 A	700 Vrms / 1000 Vdc

#### **3P Output Condition (Pre phase)**

Model Name	Power Rating	Max. Output Current	Max. Output Voltage
ASR-6450-09	3000 VA	30 / 15 A	350 Vrms / 500 Vdc
ASR-6600-12	4000 VA	40 / 20 A	350 Vrms / 500 Vdc
ASR-6450-13.5	4500 VA	45 / 22.5 A	350 Vrms / 500 Vdc
ASR-6600-18	6000 VA	60 / 30 A	350 Vrms / 500 Vdc
ASR-6600-24	8000 VA	80 / 40 A	350 Vrms / 500 Vdc

## Set Up

We take the illustration of 3P4W Input Connection here for example. Please refer to page 28 of the Input Terminal Connection chapter for the detailed information covering the 2 different connection methods.

INPUT

#### Power Up and Procedure

Connect the AC power cords to the AC input terminals.

- ✓ Red  $\rightarrow$  L3
- ✓ Green → L2
- ✓ Yellow → L1
- ✓ Blue → Neutral

- Power input cords are not included in this product.
- The input & output terminals necessitate connectivity through ring-type connectors.

Install the protective lid of power input terminals followed by fastening the single screw to fix the lid firmly into place.

## **GWINSTEK**

The AC power cords of 3P4W input are connected with the AC input terminals equipped with protective lid completely.

Turn ON circuit breakers in the sequence of MASTER followed by SLAVE. In the case of multiple SLAVE units in parallel connection, turn ON each circuit breaker of SLAVE in proper sequence, e.g., SLAVE-1 -> SLAVE-2, and so forth.

Press the *POWER* key. The welcome screen of GWINSTEK will be displayed followed by selfchecking procedure before the continuous mode screen appears with the settings loaded.

•	If the warning message of "Parallel Communication Error" appears in the screen display, turn Off both <i>POWER</i> key and circuit breakers followed by repeating the appropriate power up procedure above.
•	Contact local dealer in your region if the warning message of "Parallel Communication Error" can Not be solved after repeating the power up procedure.
•	The power supply takes around 35 seconds to fully turn on and shutdown.
•	Do not turn the power on and off quickly, otherwise the unit will be damaged due to insufficient time for self-checking procedure. It is recommended to observe an interval of at least 10 seconds between power on and off.

## Input Terminal Connection

Background	Basically, the input terminal, which is located in the rear panel of unit, can be connected through 2 methods: 3P4W and 3P3W connections. Depending on varied input methods, use the corresponding power cords for connection. Refer to the following chapters
	for details of each connection.

## **Output Terminal Connection**

Background	The output terminal can output power in three modes: 1P2W, 1P3W and 3P4W. Select applicable output mode, via panel configurations, in accordance with varied applications.
	Be aware of dangerous voltages. Ensure that the power to the instrument is disabled before handling the power supply output terminals. Failing to do so may lead to electric shock.
	After configuring phase settings via the front panel, please make sure the cords connection on the rear panel is corresponding to the set configuration.

#### **1P2W Output Connection**

Disconnect the ASR unit from the mains power socket and turn the power switch off before wires connection.

Connect the output wires to the AC output terminals as follows:

- ✓ Red  $\rightarrow$  Line (L)
- ✓ Black → Neutral (N)

Install the protective cover of power output terminals followed by fastening the 4 screws to fix the protective cover firmly into place.

Note	<ul> <li>The input &amp; output terminals necessitate connectivity through ring-type connectors.</li> </ul>
	<ul> <li>Grounded Neutral Output for 1P2W output only: ASR- 6000 allows for a grounded return on the neutral output. It is suit for the medical industry that required between ground with neutral is 0 V essentially. And possible to mitigate ground loops that is ideal for reduce ground noise and isolate sensitive equipment from the effects of ground loops.</li> </ul>
	Because the neutral has been referenced to the chassis ground, be careful electric shock by yourself.

#### 1P3W Output Connection

Disconnect the ASR unit from the mains power socket and turn the power switch off before wires connection.

Connect the output wires to the AC output terminals as follows:

- ✓ Yellow → Line (L1)
- ✓ Green → Line (L2)
- ✓ Blue → Neutral (N)

### Remote Sensing, EXT I/O and Interface Connection

Remote Sensing	Remote sense is used to compensate for the voltage drop seen across load cables due to resistance inherent in the load cables. The remote sense function can compensate a maximum of 5% of the output voltage and all of output frequency. Based on different 3 output methods, the connections of remote sense vary accordingly. Refer to the following chapters of remote sense connections for each power output method.
WARNING	Dangerous voltages. Ensure that the power to the instrument is disabled before handling the power supply output terminals. Failing to do so may lead to electric shock.
Note	To minimize noise pickup or radiation, the load wires and remote sense wires should be twisted-pairs of the shortest possible length. Shielding of the sense leads may be necessary in high noise environments. Where shielding is used, connect the shield to the chassis via the rear panel ground screw. Even if noise is not a concern, the load and remote sense wires should be twisted-pairs to reduce coupling, which might impact the stability of the power supply. The sense leads should be separated from the power leads.
EXT I/O & Interface	Since EXT I/O & Interface connections relate to several types and connectors, refer to User Manual of ASR-6000 for more details when necessary.

# Firmware Update

Background	The ASR series firmware can be upgraded using the USB A-type port on the front panel. See your local distributor or the GWINSTEK website for the latest firmware information.
Note Note	<ul> <li>Both Master and Slave ASR units are required to be plugged in USB flash drives with the identical firmware version in order to complete update process simultaneously.</li> <li>To be free from unexpected erroneous issues, please prepare, for example, 4 USB flash drives for 1 Master and 3 Slave units in parallel connection. DO NOT update partial ASR units, e.g., only update Master but without Slave units.</li> <li>Ensure the DUT is not connected.</li> <li>Ensure the output is surely off.</li> </ul>
Steps	<ol> <li>Since the USB A-type port is hidden within a plastic frame in Slave unit, please identify the removable cover in the right-side corner of front panel as the figure shown below.</li> </ol>

Removable Cover

2. Loosen the two screws on the removable cover.

3. The removable cover is removed accordingly.

4. Pull out the plastic frame from ASR Slave unit.

5. The plastic frame was removed and thus the USB A-type port of Slave unit appears.

- 6. Repeat the previous step 1 to step 5 for each connected ASR Slave unit.
- Insert USB flash drives into the USB A-type ports on front panel of both Master and Slave units. The USB drives should include the gw\_sb6.upg file in a directory name "gw" (USB\gw:).

Menu

8. Press the *Menu* key on the Master unit. and the Menu setting will appear on the display of Master unit.

9. Use the scroll wheel to go to item 11, *Special Function* and press *Enter*.

- 10. Key in the password when prompted and then press *Enter*. The password is "5004".
- 11. Go to Item 1, *Update Firmware* and press *Enter*.

12. Wait for the units to update. Upon completion the units will automatically reboot.

If the following case occurs during update process as the diagram below, it indicates failure of update and please thus contact GWINSTEK or your local dealer.

- 1) Y connection is three-phase, five-wire, Delta connection is three-phase, four-wire. (Accessories will be provided)
- 2) In the case of AC-INT mode, the rate output voltage, resistance load at maximum output current, 45 Hz to 65 Hz and sine wave output only.
- 3) Can be only set in 3P4W mode.
- For phase voltage setting in polyphase output. In balance mode all phase are collectively set and in unbalance mode each phases are individually set.
- 5) For an output voltage of 10 V to 175 V / 20 V to 350 V, sine wave, an output frequency of 45 Hz to 65 Hz, no load, DC voltage setting 0V (AC+DC mode) and  $23^{\circ}C \pm 5^{\circ}C$ . For phase voltage setting in the polyphase output.
- 6) Line voltage only can be set in balance mode.
- 7) If the output voltage is higher than rated value, this is limited to satisfy the power capacity. If there is the DC superimposition, the active current of AC+DC satisfies the maximum current. In the case of 40 Hz or lower or 400 Hz or higher, and that the ambient temperature is 40 degree or higher, the maximum current may decrease.
- 8) With respect to the capacitor-input rectifying load. Limited by the maximum current.
- External power injection or regeneration which is over short reverse power flow capacity is not available.
- 10) \*For 45 Hz to 65 Hz, the rated output voltage, no load and the resistance load for the maximum current, and the operating temperature range.
- 11) L1, L2 and L3 phase can be set independ at independ mode in the polyphase output.
- 12) Can be set only with independ mode in polyphase output.
- 13) For an output voltage of 50V or higher, sine wave, same load and voltage condition for all phase.
- 14) In the case of the AC mode and output voltage setting to 0 V,  $23^{\circ}C \pm 5^{\circ}C$
- 15) For an output voltage of -250 V to -10 V, +10 V to +250 V / -500 V to -20 V, +20 V to +500 V, no load, AC voltage set to 0V (AC+DC mode) and  $23^{\circ}C \pm 5^{\circ}C$
- 16) If the output voltage is higher than rated value, this is limited to satisfy the power capacity. If there is the AC superimposition, the active current of AC+DC satisfies the maximum current. And the ambient temperature is 40 degree or higher, the maximum current may decrease.
- 17) Instantaneous within 3 ms, limited by the maximum current at rated output voltage.
- 18) For an output voltage of 75 V to 175 V / 150 V to 350 V, a load power factor of 1, stepwise change from an output current of 0 A to maximum current (or its reverse), using the output terminal on the rear panel.
- 19) 50 % or higher of the rated output voltage, the maximum current or lower, AC and AC+DC modes, THD+N. For the polyphase output, it is a specification for phase

voltage setting.

- 20) For an output voltage of 100 V / 200 V, a load power factor of 1, with respect to stepwise change from an output current of 0 A to the maximum current (or its reverse).  $10\% \sim 90\%$  of output voltage.
- 21) For 5 Hz to 1 MHz components in DC mode using the output terminal on the rear panel.

1) In the polyphase output, the specification is for phase voltage, and the DC average value display cannot be selected.

- Accuracy values are in the case that the output voltage is within voltage setting range.
- 3) The accuracy is for output waveform DC or sine wave only.
- 4) Accuracy values are in the case that the output current is 5% to 100% of the maximum current.
- 5) The accuracy is for output waveform DC or sine wave only.
- 6) In the polyphase output, these are the specifications for each phase.
- 7) For an output voltage of 50 V or greater, an output current in the range of 10 % to 100 % of the maximum current, DC or an output frequency of 45 Hz to 65 Hz.
- 8) The apparent and reactive powers are not displayed in the DC mode.

1) In the polyphase output, the specification is for phase voltage, and the DC average value display cannot be selected.

2) Accuracy values are in the case that the output voltage is within voltage setting

range.

GWINSTEK

- 3) The accuracy is for output waveform DC or sine wave only.
- 4) Accuracy values are in the case that the output current is 5% to 100% of the maximum current.
- 5) The accuracy is for output waveform DC or sine wave only.
- 6) In the polyphase output, these are the specifications for each phase.
- 7) For an output voltage of 50 V or greater, an output current in the range of 10 % to 100 % of the maximum current, DC or an output frequency of 45 Hz to 65 Hz.
- 8) The apparent and reactive powers are not displayed in the DC mode.
- 9) For the load with the power factor 0.5 or higher.
- 10) For the load with the power factor 0.5 or lower.
- 11) The measurement does not conform to the IEC or other standard. Phase Voltage and Phase Current.
- 12) For an output voltage of 10 V to 175 V / 20 V to 350 V.
- 13) An output current in the range of 5 % to 100 % of the maximum current.

A value with the accuracy is the guaranteed value of the specification. However, an
accuracy noted as reference value shows the supplemental data for reference when the
product is used, and is not under the guarantee. A value without the accuracy is the
nominal value or representative value (shown as typ.).

2) In the case of AC-INT mode, the rate output voltage, resistance load at maximum output current, 45 Hz to 65 Hz and sine wave output only.

- 3) Can be only set in 3P4W mode.
- For phase voltage setting in polyphase output. In balance mode all phase are collectively set and in unbalance mode each phases are individually set.
- 5) For an output voltage of 10 V to 175 V / 20 V to 350 V, sine wave, an output frequency of 45 Hz to 65 Hz, no load, DC voltage setting 0V (AC+DC mode) and 23°C ± 5°C. For phase voltage setting in the polyphase output.
- 6) Line voltage only can be set in balance mode.
- 7) If the output voltage is higher than rated value, this is limited to satisfy the power capacity. If there is the DC superimposition, the active current of AC+DC satisfies the maximum current. In the case of 40 Hz or lower or 400 Hz or higher, and that the ambient temperature is 40 degree or higher, the maximum current may decrease.
- 8) With respect to the capacitor-input rectifying load. Limited by the maximum current.
- 9) External power injection or regeneration which is over short reverse power flow capacity is not available.

- 10) \*For 45 Hz to 65 Hz, the rated output voltage, no load and the resistance load for the maximum current, and the operating temperature range.
- 11) L1, L2 and L3 phase can be set independ at independ mode in the polyphase output.
- 12) Can be set only with independ mode in polyphase output.
- 13) For an output voltage of 50V or higher, sine wave, same load and voltage condition for all phase.
- 14) In the case of the AC mode and output voltage setting to 0 V, 23°C ± 5°C
- 15) For an output voltage of -250 V to -10 V, +10 V to +250 V / -500 V to -20 V, +20 V to +500 V, no load, AC voltage set to 0V (AC+DC mode) and  $23^{\circ}C \pm 5^{\circ}C$
- 16) If the output voltage is higher than rated value, this is limited to satisfy the power capacity. If there is the AC superimposition, the active current of AC+DC satisfies the maximum current. And the ambient temperature is 40 degree or higher, the maximum current may decrease.
- 17) Instantaneous within 3 ms, limited by the maximum current at rated output voltage.
- 18) For an output voltage of 75 V to 175 V / 150 V to 350 V, a load power factor of 1, stepwise change from an output current of 0 A to maximum current (or its reverse), using the output terminal on the rear panel.
- 19) 50 % or higher of the rated output voltage, the maximum current or lower, AC and AC+DC modes, THD+N. For the polyphase output, it is a specification for phase voltage setting.
- 20) For an output voltage of 100 V / 200 V, a load power factor of 1, with respect to stepwise change from an output current of 0 A to the maximum current (or its reverse). 10% ~ 90% of output voltage.
- For 5 Hz to 1 MHz components in DC mode using the output terminal on the rear panel.

- 1) In the polyphase output, the specification is for phase voltage, and the DC average value display cannot be selected.
- 2) Accuracy values are in the case that the output voltage is within voltage setting range.
- 3) The accuracy is for output waveform DC or sine wave only.
- Accuracy values are in the case that the output current is 5% to 100% of the maximum current.
- 5) The accuracy is for output waveform DC or sine wave only.
- 6) In the polyphase output, these are the specifications for each phase.
- For an output voltage of 50 V or greater, an output current in the range of 10 % to 100 % of the maximum current, DC or an output frequency of 45 Hz to 65 Hz.
- 8) The apparent and reactive powers are not displayed in the DC mode.
- 9) For the load with the power factor 0.5 or higher.
- 10) For the load with the power factor 0.5 or lower.
- 11) The measurement does not conform to the IEC or other standard. Phase Voltage and Phase Current.
- 12) For an output voltage of 10 V to 175 V / 20 V to 350 V.
- 13) An output current in the range of 5 % to 100 % of the maximum current.

- A value with the accuracy is the guaranteed value of the specification. However, an
  accuracy noted as reference value shows the supplemental data for reference when the
  product is used, and is not under the guarantee. A value without the accuracy is the
  nominal value or representative value (shown as typ.).
- Product specifications are subject to change without notice.

### Information of Name Order

The name order of ASR-6000 series has its rules in definition for each character by order. Refer to the following contents for details.

Background	The definitions below describe the meanings behind each group of alphanumeric characters, in varied colors, of naming code for ASR series models.
