

PHU-Series

Multi-Range High Power DC Source

FEATURES

- Voltage Output: 80 V/200 V/500 V/750 V/1000 V/1500 V
- Power Output: 5 kW/10 kW/15 kW
- Maximum Current Output: 510 A
- C.V/C.C Priority Mode
- Adjustable Voltage/Current Rise and Fall Time
- AWS (Advanced Web Control)
- APC (Adaptive Parallel Connection)
- Parallel Connection (Maximum 10 Units)
- · High Efficiency and High-power Density
- Bleeder Control Function
- Internal Resistance Function
- Panel Lock Function
- Three Sets of Preset Function
- Protection: OVP, OCP, OHP, UVL, AC Fail, FAN Fail
- Standard : USB, LAN, Isolated Analog Control
- Option: RS-232&485 or GPIB or CAN Bus or DeviceNet or Any Bus
- 3 U Height and 19" Rack Mount Size

Prestige / Harmony / Universal

The PHU Series is a single channel programmable DC power supply with multi-range output feature which offers a wide range of voltage and current combinations for greater flexibility. The circuit design adopts SiC (silicon carbide) components to achieve high power density characteristics which can generate 15 kW high output and keep the compact size at just 3 U height.

PHU's wide voltage and current range, along with its high-power characteristics, can cover a broader range of testing applications such as photovoltaic systems, electric vehicles (EVs), and automotive electronics, etc. The launch of PHU high-power DC power supplies enhances the completeness of the DC power supply product line of GW Instek, and to provide customers with more comprehensive and integrated solutions.

The AWS (Advanced Web Server) function allows the user to operate devices directly through a web browser, without needing to install any complicated software or drivers. This functionality allows users to complete tasks more efficiently, saving time and increasing productivity.

The unique APC (Adaptive Parallel Connection) feature offers adaptability in parallel connection, allowing users to make the best choice according to their needs. For instance, users can opt for a 15 kW model and a 10 kW model, to combine both to reach a 25 kW capacity within their budget constraints. Up to 10 PHU units can be connected to reach 150 kW without the need for additional power distribution for control.

For industry interface, PHU provides a variety of embedded industrial interface options to meet user needs, eliminating the need for users to prepare additional interfaces. The available ports including EtherCAT, CANopen, Modbus, Profinet and DeviceNet, etc. Except the standard built-in programmable sequence function, PHU also offers a variety optional functions including Datalogger, MPPT (Maximum Power Point Tracking), Solar Array Simulator, AH/WH Meter and Battery Simulation to meet customer's requirements.

There are a total of 18 models, consisting of 3 power capacities (5 kW/10 kW/15 kW) and 6 voltages (80 V/200 V/500 V/750 V/ 1000 V/1500 V) to meet all customer needs.

A. AWS (ADVANCED WEB SERVER)

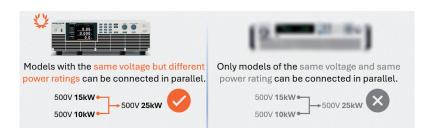

AWS is a powerful function that simplifies operations. With AWS, users can operate devices directly through a web browser, without needing to install any complicated software or drivers. This functionality allows users to complete tasks more efficiently, saving time and increasing productivity. Simply connect to the LAN port, enter the IP address through any web browser, and you can perform tasks such as device control, parameter settings, and function toggling without needing to install or learn any additional software.

C. APC (ADAPTIVE PARALLEL CONNECTION)

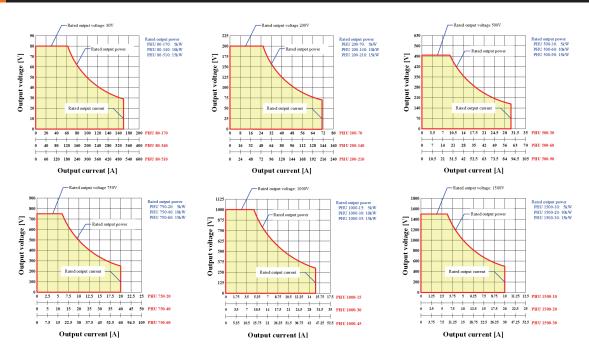

It is easy to set up the master-slave in the parallel connection function.

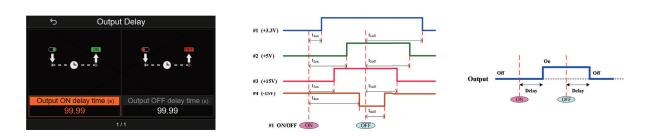

The unique APC (Adaptive Parallel Connection) feature offers adaptability in parallel connection, allowing users to make the best choice according to their needs. For instance, users can opt for a 15 kW model and a 10 kW model, to combine both to reach a 25 kW capacity within their budget constraints. Up to 10 PHU units can be connected to reach 150 kW without the need for additional power distribution for control.

D. MULTI-RANGE OUTPUT

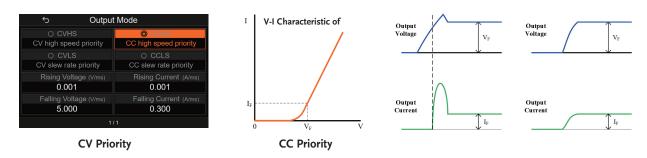

This feature enables the power supply to automatically adapt to higher output voltages when there is a smaller current or handle higher currents when there is a lower voltage. It allows the use of a single source to address multiple voltage and current combinations.

OUTPUT ON/OFF DELAY

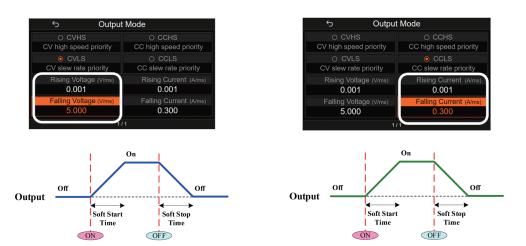

The output ON/OFF delay feature enables the setting of a specific time delay for output on after the power supply output is turned on, and a specific time delay for output off after the power supply output is turned off.

F. CC/CV PRIORITY

The PHU-Series has CV and CC priority modes. The CC priority mode can prevent inrush current and surge voltage from occurring at turn-on to protect DUT.

G. SLEW RATE CONTROL (SOFT START/STOP)

The default voltage (or current) rising speed when starting/stopping the output is set as the highest speed. PHU provides the function for the user to set the speed per their request for applications.

In CVLS (Constant Voltage Low Speed) mode, the user can set the parameter to control the voltage rising when starting the output and the voltage falling when stopping the output.

In CCLS (Constant Current Low Speed) mode, the user can set the parameter to control the current rising when starting the output and the current falling when stopping the output.

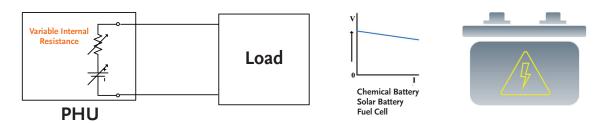

BLEED CIRCUIT ON/OFF CONTROL

The bleeder circuit is a power supply circuit designed to discharge the electric charge stored in the power supply filter capacitors when the equipment is turned OFF, primarily for safety reasons to protect the DUT.

The bleed function can be disabled for specific purposes, such as battery applications.

. VARIABLE INTERNAL RESISTANCE

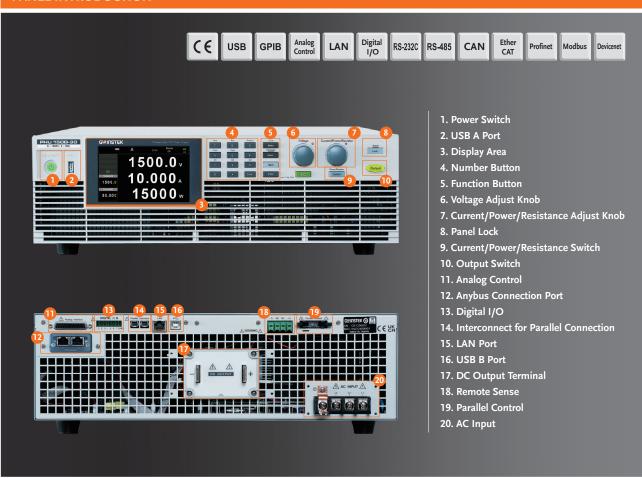

The internal resistance of the power supply can be user-defined in software. When the internal resistance is set it can be seen as a resistance in series with the positive output terminal. This allows the power supply to simulate power sources that have internal resistances such as lead acid batteries.

FUNCTION

Except the standard built-in programmable sequence function, PHU also offers a variety of optional functions including Datalogger, Capacity/Energy, Solar Array Simulator, and Battery Simulation to meet customer's requirements.

- $\pm 1. Minimum \ voltage$ is guaranteed to maximum 0.2 % of the rated output voltage.

- *2.Minimum current is guaranteed to maximum 0.4 % of the rated output current.

 *3.At 180 Vac to 265 Vac or 342 Vac to 528 Vac, constant load.

 *4.From No-load to Full-load, constant input voltage. Measured at the sensing point in Remote Sense.
- *5. For 80 V, 200 V models: Measure with JEITA RC-9131B (1:1) probe. For 500 V, 750 V, 1000 V and 1500 V models: Measured with (100:1) probe.
- *6.Measurement frequency bandwidth is 10 Hz to 20 MHz.
- *7.Measurement frequency bandwidth is 5 Hz to 1 MHz.
- *8. From 10 % to 90 % of rated output voltage, with rated resistive load.
- *9.From 90 % to 10 % of rated output voltage, with rated resistive load.
 *10.Time for output voltage to recover within 1 % of its rated output for a load change from 10 % to 90 % of its rated output current.
 Voltage set point from 10 % to 100 % of rated output.
- *11.For load voltage change, equal to the unit voltage rating, constant input voltage.

- $\pm 1. Minimum \ voltage$ is guaranteed to maximum 0.2 % of the rated output voltage.

- *2.Minimum current is guaranteed to maximum 0.4 % of the rated output current.

 *3.At 180 Vac to 265 Vac or 342 Vac to 528 Vac, constant load.

 *4.From No-load to Full-load, constant input voltage. Measured at the sensing point in Remote Sense.
- *5. For 80 V, 200 V models: Measure with JEITA RC-9131B (1:1) probe. For 500 V, 750 V, 1000 V and 1500 V models: Measured with (100:1) probe.
- *6.Measurement frequency bandwidth is 10 Hz to 20 MHz.
- *7.Measurement frequency bandwidth is 5 Hz to 1 MHz.
- $\pm 8. From 10~\%$ to 90 % of rated output voltage, with rated resistive load.
- *9.From 90 % to 10 % of rated output voltage, with rated resistive load.
 *10.Time for output voltage to recover within 1 % of its rated output for a load change from 10 % to 90 % of its rated output current.
 Voltage set point from 10 % to 100 % of rated output.
- *11.For load voltage change, equal to the unit voltage rating, constant input voltage.
- $\pm 12. The \ ripple$ is measured at 20 % to 100 % output voltage and full output current.
- $\pm 13. For output power change from 10 <math display="inline">\%$ to 90 %, constant input voltage.
- *14.At rated output power.
