SAFETY INSTRUCTIONS

This chapter contains important safety instructions that you must follow during operation and storage. Read the following before any operation to ensure your safety and to keep the instrument in the best possible condition.

Safety Symbols

These safety symbols may appear in this manual or on the instrument.

ì

Warning: Identifies conditions or practices that could result in injury or loss of life.

Caution: Identifies conditions or practices that could result in damage to the instrument or to other properties.

DANGER High Voltage

Attention Refer to the Manual

Earth (ground) Terminal

Frame or Chassis Terminal

Do not dispose electronic equipment as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased.

Safety Guidelines

General Guideline

- Do not place any heavy object on the instrument.
- Avoid severe impact or rough handling that leads to damaging the instrument.
- Do not discharge static electricity to the instrument.
- Use only mating connectors, not bare wires, for the terminals.
- Ensure signals to the RF input do not exceed +30dBm.
- Ensure reverse power to the TG output terminal does not exceed +30dBm.
- Do not supply any input signals to the TG output.
- Do not block the cooling fan opening.
- Do not disassemble the instrument unless you are qualified.

(Measurement categories) EN 61010-1:2010 specifies the measurement categories and their requirements as follows. The instrument falls under category II.

- Measurement category IV is for measurement performed at the source of low-voltage installation.
- Measurement category III is for measurement performed in the building installation.
- Measurement category II is for measurement performed on the circuits directly connected to the low voltage installation.
- Measurement category I is for measurements performed on circuits not directly connected to Mains.

Power Supply

- AC Input voltage range: 100V~240V
- Frequency: 50/60Hz
- To avoid electrical shock connect the protective grounding conductor of the AC power cord to an earth ground.

Battery CAUTION

Rating: 11.1V, 6 cell Li-ion battery

Turn off the power and remove the power cord before installing or removing the battery.

Cleaning

- Disconnect the power cord before cleaning.
- Use a soft cloth dampened in a solution of mild detergent and water. Do not spray any liquid.
- Do not use chemicals containing harsh material such as benzene, toluene, xylene, and acetone.

Operation Environment

- Location: Indoor, no direct sunlight, dust free, almost non-conductive pollution (Note below)
- Temperature: 5°C to 45°C
- Humidity: <90%

(Pollution Degree) EN 61010-1:2010 specifies the pollution degrees and their requirements as follows. The instrument falls under degree 2.

Pollution refers to "addition of foreign matter, solid, liquid, or gaseous (ionized gases), that may produce a reduction of dielectric strength or surface resistivity".

- Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.
- Pollution degree 2: Normally only non-conductive pollution occurs. Occasionally, however, a temporary conductivity caused by condensation must be expected.
- Pollution degree 3: Conductive pollution occurs, or dry, nonconductive pollution occurs which becomes conductive due to condensation which is expected. In such conditions, equipment is normally protected against exposure to direct sunlight, precipitation, and full wind pressure, but neither temperature nor humidity is controlled.

Storage environment

Location: Indoor

Temperature: -20°C to 70°C

Humidity: <90%

Disposal

Do not dispose this instrument as unsorted municipal waste. Please use a separate collection facility or contact the supplier from which this instrument was purchased. Please make sure discarded electrical waste is properly recycled to reduce environmental impact.

Power cord for the United Kingdom

When using the instrument in the United Kingdom, make sure the power cord meets the following safety instructions.

NOTE: This lead/appliance must only be wired by competent persons

 $\overline{'!}$ WARNING: THIS APPLIANCE MUST BE EARTHED

IMPORTANT: The wires in this lead are coloured in accordance with the

following code:

Green/ Yellow: Earth
Blue: Neutral
Brown: Live (Phase)

As the colours of the wires in main leads may not correspond with the coloured marking identified in your plug/appliance, proceed as follows:

The wire which is coloured Green & Yellow must be connected to the Earth terminal marked with either the letter E, the earth symbol or coloured Green/Green & Yellow.

The wire which is coloured Blue must be connected to the terminal which is marked with the letter N or coloured Blue or Black.

The wire which is coloured Brown must be connected to the terminal marked with the letter L or P or coloured Brown or Red.

If in doubt, consult the instructions provided with the equipment or contact the supplier.

This cable/appliance should be protected by a suitably rated and approved HBC mains fuse: refer to the rating information on the equipment and/or user instructions for details. As a guide, a cable of 0.75mm² should be protected by a 3A or 5A fuse. Larger conductors would normally require 13A types, depending on the connection method used.

Any exposed wiring from a cable, plug or connection that is engaged in a live socket is extremely hazardous. If a cable or plug is deemed hazardous, turn off the mains power and remove the cable, any fuses and fuse assemblies. All hazardous wiring must be immediately destroyed and replaced in accordance to the above standard.

GETTING STARTED

This chapter provides a brief overview of the GSP-9330, the package contents, instructions for first time use and an introduction to the front panel, rear panel and GUI.

GSP-9330 Introduction

The GSP-9330 builds on the strong feature set of the GSP-9300 and significantly increases performance in almost every aspect; making this the most comprehensive and feature-rich spectrum analyzer GW Instek has released.

Like the GSP-9300, the GSP-9330 features a split window display to view data in spectrum, topographic or spectrographic views. There are also a number of additional test functions such as 2FSK, P1DB and new dedicated EMC pretest functions for EMI and EMS testing. Lastly, the GSP-9330 significantly reduces the sweep time.

Main Features

Performance

- 9kHz~3.25GHz bandwidth
- 1Hz resolution
- Nominal RBW accuracy of ±5% <1MHz, ±8% =1MHz
- Video bandwidth 1Hz~1MHz (1-3-10 steps)
- Amplitude measurement range: DANL~30dBm (frequency dependent)
- Input attenuation: 0 ~ 50dB, 1dB steps
- Phase noise: < -88dBc/Hz@1GHz, 10kHz, typical

Features

- 1-3-10 step increments for RBW bandwidth
- Three display modes: Spectrum, Topographic and Spectrographic
- Split window display
- Built-in EMI filter
- Auto Wake-up
- · Built-in preamplifier
- Gate sweep

- Marker Frequency counter
- Two operating modes: Spectrum and Power Meter mode
- EMI Pretest functions
- SEM measurement
- ACPR measurement
- OCBW measurement
- 2FSK measurement
- · Phase jitter measurement
- Harmonics measurement
- P1dB measurement
- Channel power measurement
- · Demodulation analyzer
- Diverse marker functions and features with Peak Table
- Sequence function to automatically perform preprogrammed sequential operations
- EMI quasi-peak and average detector

Interface

- 8.4 color LCD (800×600)
- On-screen menu icons
- DVI-I video output
- RS-232 with RTS/CTS hardware flow control
- USB 2.0 with support for USB TMC
- LAN TCP/IP with LXI support
- Optional GPIB/IEEE488 interface
- Optional 3G USB adapter for WLAN
- Optional power meter adapter
- IF output @ 886MHz
- Headphone output
- REF (reference clock) input/output BNC ports

- Alarm/Open collector output BNC port
- Trigger/Gate input BNC ports
- RF N-type input port
- Tracking generator output
- DC +7V/500mA output SMB port

Accessories

Standard Accessories	Part number	Description
	Region dependant	Power cord
	N/A	User manual CD: Includes: User manual, Programming manual, SpectrumShot quick start guide, SpectrumShot software, IVI driver
	N/A	Quick start guide
	N/A	Certificate of calibration
	Region dependant	Power cord
Options	Option number	Description
	TG	Tracking generator
	GPIB	GPIB interface (IEEE 488 bus)
Optional Accessories	Part number	Description
	ADB-002	DC block BNC 50R 10MHz- 2.2GHz
	ADB-006	DC BLOCK N TYPE 50R 10MHz-6GHz
	ADB-008	DC BLOCK SMA 50R 0.1MHz-8GHz
	GSC-009	Soft Carrying Case
	GRA-415	6U Rack mount kit

Android System ("GSP-9330 Remote Control", available on Google play.)

Appearance

GSP-9330 Front Panel

LCD display

800×600 color LCD display. The display shows the soft keys for the current function, frequency, amplitude and marker information.

Function keys

The F1 to F7 function keys directly correspond to the soft keys on the right-hand side of display.

Main keys

Sets the center frequency, start frequency, stop frequency, center frequency step and frequency offset values.

	Span	Sets the span, with options for full span, zero span and last span.
	Amplitude	Sets the amplitude reference level, attenuation, pre-amplifier controls, scale and other options for attenuation and scale.
	Autoset	Automatically searches the peak signal with maximum amplitude and displays it with appropriate horizontal and vertical scales.
Control keys	BW/Avg	Sets the resolution bandwidth, video bandwidth, average type and turns the EMI filter on/off.
	Sweep	Sets the sweep time and gate time.
	Sweep Mode	Toggles the Sweep Control between <i>Fast</i> and <i>Normal</i> mode.
	Measure	Accesses measurement options such as ACPR, OCBW, demodulation measurements, SEM, TOI, 2FSK, phase jitter and other advanced measurements.
	EMC Pretest	Dedicated EMI testing and setup menu.
	Trace	Sets traces and trace related functions.
	Limit Line	Sets and tests Pass/Fail limit lines.

	Display	The Display key configures the windowing mode and basic display properties.
	Trigger	Sets the triggering modes.
File	File	File utilities options
	Save	Save the trace, state etc., and save options.
	Recall	Recall the trace, state etc., and recall options.
Marker	Marker	Turns the Markers on/off and configures the markers.
	Marker •	The <i>Marker</i> ▶ key positions the markers on the trace.
	Peak Search	Finds each maximum and minimum peak. Used with the Marker function.
Auxiliary	Sequence	Access, set and edit program sequences.
	Option Control	The <i>Option Control</i> key allows you to setup optional accessories such as the Tracking Generator, Power Meter or Demo Kit.
	System	The System key shows system information, settings and other system related functions.

Preset / Local key

The *Preset* key will restore the spectrum analyzer to the Factory or User Preset settings.

The Preset key will also return the instrument back to local control after it has been in remote control mode.

The Quick Save utility allows you to save either the state, trace, display screen, limit line, correction or sequence with only a single press.

Power key

Turns the instrument on/off. On = yellow, off = blue.

Scroll wheel

Edit values, select listed items.

Arrow keys

Increment/decrement values (in steps), select listed items.

RF input terminal

RF input port. Accepts RF inputs.

- * Maximum input: +30dBm
- * Input impedance: 50Ω
- * Maximum DC voltage: ±50V
- * N-type: female

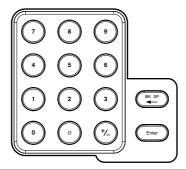

DC power supply

SMB port supplies power for optional accessories.

- * DC +7V
- * 500mA Max.

Numeric keypad

The numeric keypad is used to enter values and parameters. It is often used in conjunction with the arrow keys and scroll wheel.

TG output port

The Tracking Generator (TG) output source.

- * N-type: female
- * Input impedance: 50Ω
- * Output power: -50dBm to 0dBm
- * Maximum reversed power: +30dBm

USB A, Micro SD

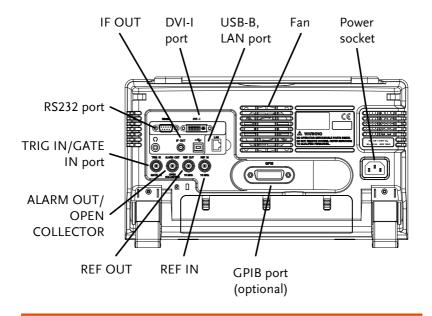

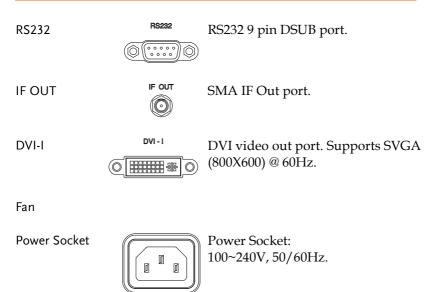

USB A port, Micro SD port for⇒ saving/recalling settings/files.

Rear Panel

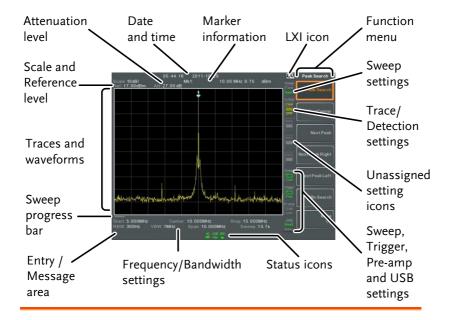

REF IN	REF IN 10 MHz	BNC female reference input.
REF OUT	REF OUT	BNC female reference output: $10 MHz$, 50Ω impedance
Security Lock		
ALARM OUT	ALARM OUT OPEN COLLECTOR	BNC female open collector Alarm output.
TRIG IN/GATE IN	TRIG IN GATE IN	BNC female 3.3V CMOS trigger input/gated sweep input.
Phone	() ()	3.5mm stereo headphone jack (wired for mono operation)
USB B		USB B Device port. USB 1.1/2.0
LAN	LAN	RJ-45 10Base-T/100Base-Tx

Display

Scale Displays the vertical scale of the vertical grid.

Reference level Displays the reference level.

Attenuation Displays the vertical scale (attenuation) of the

input signal.

Date/Time Displays the date and time.

Marker information

Displays marker information.

LXI icon This icon indicates the status of the LXI connection.

Function menu Soft menu keys associated with the F1 to F7

function keys to the right of the display.

Sweep Mode	Sweep Fast Nor.	This icon displays the sweep mode, as set by the Sweep Mode key.
Sweep settings	Sweep Cont	Sweep icon that shows the sweep status.
Trace and detection settings	Tr/Det C&W PLST SMP	Trace icon that shows the trace type and the detection mode used for each trace.
Blank	Blank	Unassigned setting icons.
Trigger settings	Trigger Tree	Trigger icon that shows the trigger status.
Pre-amp settings	Pr-amp 20dB OFF	Pre-amplifier icon that shows the Pre-amplifier status.
USB settings	USB Host Dev.	Displays the status of the USB A port.
Status Icons	Displays the interface status, power source status and alarm status, etc. See the Status Icon Overview on page 23 for a list of the status icons.	
Frequency/ Bandwidth settings	Displays the Start, Center and Stop frequencies, RBW, VBW, Span and Sweep settings.	
Entry/Message area	This area is used to show system messages, errors and input values/parameters.	
Trace and waveforms	Main display showing the input signals, traces, limit lines and marker positions.	

Sweep progress The sweep progress bar shows the progress of bar slow sweeps (greater than 2 seconds).

Status Icon Overview

3G Adapter	3G USB	Indicates that the 3G adapter is installed and turned on.
Demo Kit	ACM USB	Indicates that the demo kit is installed and turned on.
PreAmp	20dB ON	Indicates that the pre amplifier is on.
AC	AC	Shown when running on AC power.
Alarm Off	ALM (🙀)	Alarm buzzer output is currently off.
Alarm On	ALM ()	Alarm buzzer output is currently on.
Amplitude Offset	AMP	Indicates that the amplitude-shift is active. This icon appears when
		amplitude-related functions are used: Reference level offset Amplitude Correction Input $Z = 75\Omega$ and Input $Z = 20$
Bandwidth Indicator	BW 😓	used: Reference level offset Amplitude Correction
	BW ♣ AVG ∑∕N	used: Reference level offset Amplitude Correction Input $Z = 75\Omega$ and Input Z cal >0 Indicates that the RBW or VBW

External Trigger	JUL	External trigger signal is being used.
Math	Math ★	Trace math is being used.
Sequence Indicator	SEQ P	Shown when a sequence is running.
Sweep Indicator	SWT	Indicates that the sweep time is manually set.
Tracking generator	TG	Indicates that the tracking generator is turned on.
TG Normalization	TG	Indicates that the tracking generator has been normalized.
Wake-up clock	TIME	Indicates that the wake-up clock is turned on.
USB	USB •€•	Indicates that a USB flash drive is inserted into the front panel and is recognized.
Micro SD	uSD	Indicates that a micro SD card is inserted into the front panel and is recognized.

First Use Instructions

Use the procedures below when first using the GSP-9330 to tilt the stand, power up the instrument, set the internal clock, set the wake-up clock, update the firmware and to restore the default settings. Lastly, the Conventions sections will introduce you to the basic operating conventions used throughout the user manual.

Tilting the Stand

Description The GSP-9330 has two adjustable rubber feet that

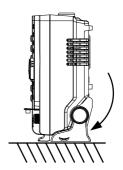

can used to position the instrument into two

preset orientations.

Upright Position Tuck the feet under the

bottom of the instrument to stand the instrument

upright.

Leaning Position Pull the feet back to have

the instrument leaning

back.

Power UP

Steps

- 1. Insert the AC power cord into the power socket.
- 2. The power button exterior will be lit blue to indicate that the GSP-9330 is in standby mode.

- 3. Press the power button for a few seconds to turn the GSP-9330 on.
- 4. The power button will turn orange and the GSP-9330 will start to boot up.

It takes a little less than 1 minute for the GSP-9330 to fully startup.

Power Down

Description

The GSP-9330 has two methods to power down: Normal and Forced Power Down.

The normal power down method will save the system state and end any running processes. The state is saved for the next time the instrument is turned back on.

The forced power down method only does a minimum state save.

Normal Power Down

Press the power button. The system will automatically handle the power down procedure in the following order:

- The system state is saved.
- Outstanding processes are closed in sequence.
- The LCD backlight is turned off.
- The system enters standby mode (the power key changes from orange to blue).

The process takes ~10 seconds.

Forced Power Down

Press and hold the power button for ~4 seconds until the system turns off and the power button turns blue.

The forced power down mode might cause the GSP-9330 to perform a longer system check the next time it is powered up.

Setting the Date, Time and Wake-Up Clock

Description	The GSP-9330 can be setup to power-up automatically using the Wakeup Clock function. This feature is useful to wake-up the instrument early and eliminate settling time.
System Date	Example: Set the System Date to July 1, 2016

- 1. Press (System) > Date/Time[F4] > Set Date[F1] > Year[F1].
- 2. Press 2016>Enter[F1].
- 3. Press Month[F2] > 7 > Enter[F1].
- 4. Press Day[F3]>1>Enter[F1].
- 5. Press Return[F7].

 $\begin{tabular}{ll} {\bf System Time} & {\bf Example: Set the System Time to 9.00 AM} \\ \end{tabular}$

- 1. Press (system)>Date/Time[F4]>Set Time[F2]>Hour[F1].
- 2. Press 9>Enter[F1].
- 3. Press Minute[F2]>0>Enter[F1].
- 4. Press Second[F3]>0>Enter[F1].
- 5. Press Return[F7].

<u> </u>	Note

The System Time will be shown at the top of the display.

System Wake-Up Clock

Example: Set the GSP-9330 to wake up at $9.00~\mathrm{AM}$

- 1. Press (System) > Date/Time[F4] > Wake-Up Clock[F3] > Select Clock[F1].
- 2. Press Clock 1[F1] ~ Clock 7[F7] to choose a clock $(1 \sim 7)$.
- 3. Press *State*[*F*2] to turn the wake up clock on/off.
- 4. Press *Hour*[*F*3]>9>*Enter*[*F*1].
- 5. Press Minute[F4]>0>Enter[F1].
- 6. Press [F5] and choose Rept. (Repeat) or Single.
- 7. Press Select Date[F6] and select a day.
- 8. Press *Return*[*F7*] to save the Wake-Up Clock settings.

The system time is kept with the CR2032 clock battery. If the system time/ wake up clock can no longer be set, please replace the clock battery. See page 45.

Firmware Update

Description

The GSP-9330 allows the firmware to be updated by end-users. Before using the GSP-9330, please check the GW Instek website or ask your local distributor for the latest firmware.

System version

Before updating the firmware, please check the firmware version.

- 1. Press (System) > System Information [F1].
- 2. The firmware will be listed on the display.

- Press any other main/control/file/marker /auxiliary key to exit out of the System Information screen.
- 4. To upgrade the firmware, insert the new firmware onto a USB flash drive or Micro SD card and put the drive/card into the appropriate front panel port. The firmware files should be located in a directory named "gsp932".
- 5. Press System > More 1/2[F7] > Upgrade[F2].

6. The spectrum analyzer will automatically find the firmware on the USB flash drive and start to update the firmware. When finished, the message "Upgrade is finished" will be shown at the bottom of the screen followed by "Rebooting".

7. The system will automatically restart after the rebooting message.

The upgrade process may take a few minutes.

Restoring Default Settings

Description

The factory default settings or user presets can be easily restored using the Preset key on the front panel. By default, the factory default settings are restored with the Preset key.

Steps

- 1. Press Preset
- 2. The spectrum analyzer will load the preset settings.

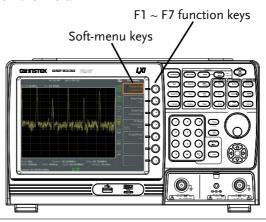

Conventions

The following conventions are used throughout the user manual. Read the conventions below for a basic grasp of how to operate the GSP-9330 menu system and front panel keys.

Soft Menu keys

The F1 to F7 function keys on the right side of the display correspond directly to the soft-menu keys on their left.

Input Parameter Values

Selecting this type of menu key will allow you to enter a new value with the numeric keypad or increment/decrement the value using the scroll wheel.

Toggle State

Pressing this menu key will toggle the state.

Toggle State & Input Parameter

Pressing this menu key will allow you to toggle the state of the function between Auto and Manual state. When in the Man state, the parameter value can be manually edited. Use the numeric keypad to enter the new value or use the scroll wheel to increment/decrement the current value.

Sub Menu

Pressing this menu key will enter a submenu.

Sub Menu to select parameter

Pressing this menu key will enter a submenu to select a parameter.

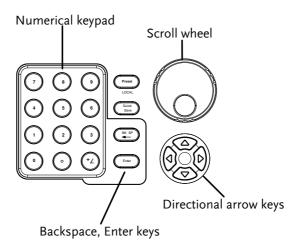

Active Function

Pressing this type of menu key will activate that function. The menu key will be highlighted to show it is the active function.

Parameter input

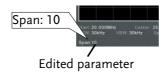

Parameter values can be entered using the numeric keypad, the scroll wheel and occasionally with the arrow keys.

keypad

Using the numeric When prompted to enter a parameter, use the number keys (0~9), the decimal key (.) and the sign key (+/-) to enter a value. After a value has been entered, the soft-menu keys can be used to select the units.

> The value of the parameter is shown at the bottom of the screen as it is edited. Values can include decimal points for non-integer values or for entering dot-decimal notation for IP addresses.

Back Space

Use the backspace key to delete the last character or number entered.

Using the scroll wheel

Use the scroll wheel to alter the current value. Clockwise increases the value, anti-clockwise

decreases the value.

Directional arrows Use the directional arrows to select discrete

parameters or to alter values by a coarser resolution than the scroll wheel. Left decreases the value, right increases the value.

Basic operation

The Basic Operation chapter in this Quick Start Guide only covers a few basic operations: how to view a signal, how to use a marker to make a measurement and how to setup the LXI interface. For comprehensive operating instructions, please see the user manual on the accompanying User Manual CD.

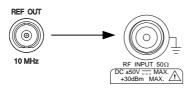

Viewing a Signal

Description

This section will give a brief overview on how to view signals from the rear panel REF out terminal. Only the basic settings will be shown.

Operation

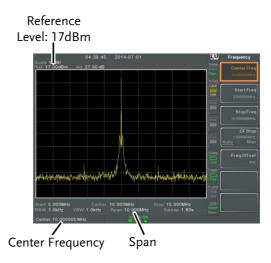

- 1. Press Presst. This will restore the factory default settings. See the user manual for details.
- 2. Connect the REF out signal from the rear panel to the RF Input on the front panel.

- 3. Press Frequency > Center[F1] and enter 10MHz. This is the output frequency of the REF out signal.
- 4. Press (Amplitude) > Ref Level[F1] and set the reference level to 17dBm.
- 5. Press span and enter a span of 10MHz. This will set the start frequency to 5MHz and the stop frequency to 15MHz.

Display

Using the Marker Function

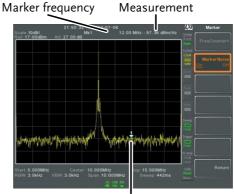

Description

This section will describe how to activate and move a normal marker. The noise marker function will also be used to show how to make a basic marker measurement.

Operation

- 1. Use the procedure described in the previous section to display a signal from the REF out terminal.
- 2. Press Marker > Select Marker[F1] and select marker number 1.
- 3. Press [F2] and turn the marker 1 on.
- Press Normal[F3] and set the marker position to 12 MHz using either the keypad, scroll wheel or arrow keys.
- Press Function[F5]>Marker Noise[F2] and turn the marker noise function on. The noise marker function calculates the average noise level over a bandwidth of 1Hz, referenced from the marker position.

Display

Marker position

Interface Configuration

The GSP-9330 supports USB, RS-232, GPIB(optional), WLAN and LAN based LXI interfaces for remote control. This Quick Start Guide only details how to connect to a LAN to access the LXI browser interface for remote control and configuration. Please see the programming manual or user manual on the accompanying User Manual CD for further details.

Configure the LAN and LXI Interface

The GSP-9330 is a class C LXI compliant instrument. The LXI specification allows instrumentation to be configured for basic remote control or monitoring over a LAN or WLAN. The GSP-9330 also supports HiSlip. HiSlip (High-Speed LAN Instrument Protocol) is an advanced LAN based standard for 488.2 communications.

For details on the LXI specification, compliance classes and HiSLIP, please see the LXI website @ http://www.lxistandard.org.

Background	The LAN interface is used for remote control over a network. The spectrum analyzer supports DHCP connections so the instrument can be automatically connected to an existing network. Alternatively, network settings can also be manually configured.		
LAN configuration Settings	IP Address Subnet Mask DHCP on/off	Default Gateway DNS Server	
Connection	Connect an Ethernet cable from the network to the rear panel LAN port.		

1. Press (System) > More[F7] > RmtInterface[F1] > LAN[F2] > LAN Config[F1] to set the LAN settings:

IP Address[F1] Sets the IP address.Subnet Mask[F2] Sets the subnet mask.

Default

Gateway[F3] Sets the default gateway.

DNS Server[F4] Sets the DNS server address

LAN Config[F5] Toggles the LAN

configuration between DHCP and manual IP settings.

2. Press *Apply*[*F6*] to confirm the LAN configuration settings.

Display Icon

The LXI icon turns green when connected to a LAN and will flash if the "Identification" setting is on, see page 42.

Set Password

The password on the LXI webpage can be set from the spectrum analyzer. The password is shown in the system information.

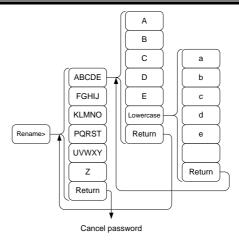

- 3. Press (System) > More[F7] > RmtInterface Config[F1] > LAN[F2] > LXIPassword[F3] to set the password.
- 4. Enter the password using the F1~F7 keys, as shown below, or use the numeric keypad to enter numbers:

Limitations:

- No spaces
- Only 1~9, A~Z, a~z characters allowed

Menu tree to enter the password

5. The password appears on the bottom of the screen as it is created.

6. Press (Enter) to confirm setting the password.

Hi SLIP Port

7. Press (System) > More [F7] > RmtInterface Config [F1] > LAN [F2] > HiSLIPPort to see the Hi Slip Port number. HiSlip port 4880

Reset LAN

It may be necessary to reset the LAN configuration settings before the LAN can be used.

8. Press System > More[F7] > RmtInterface Config[F1] > LAN Reset[F3] to reset the LAN.

LXI Browser Interface and Function Check

Functionality check

Enter the IP address of the spectrum analyzer in a web browser after the instrument has been configured and connected to the LAN (page 39).

http://XXX.XXX.XXXXXXXX

The web browser interface appears:

Welcome Page

The Welcome Page lists all the LXI and LAN configuration settings as well as the instrument identification. The instrument identification can be turned on/off from this page.

The LXI icon in the GSP-9330 display will flash when the Identification setting is turned on.

View & Modify Configuration

The View & Modify Configuration allows you to modify the LAN settings from the browser.

Press the *Modify Configuration* button to modify any of the configuration files.

A password must be entered to alter the settings.

Default password: lxiWNpwd [Note: password is case sensitive.]

SCPI Command

The SCPI Command page allows you to enter SCPI commands directly from the browser for full remote control. Please see the programming manual for details. A password must be entered before remote commands can be used.

Default password: lxiWNpwd [Note: password is case sensitive.]

Get Image

The Get Image page allows the browser to remotely capture a screenshot of the GSP-9330 display.

For further details, please see the programming manual, available on the GW Instek web site @ www.gwinstek.com.

APPENDIX

Replace the Clock Battery

Background

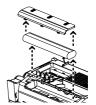

The system clock and wake-up clock keep time using a button battery.

Battery type:

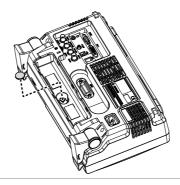

CR2032, 3V, 210mAh

Connection

1. Turn off the GSP-9330 and remove the battery cover and battery (if connected).

2. Replace the battery with the same type and specification.

Please make sure that the battery terminal is correctly inserted into the device when installing battery to avoid damage to the device.

GSP-9330 Specifications

The specifications apply when the GSP is powered on for 60 minutes* to warm-up to a temperature of 20°C to 30°C, unless specified otherwise.

* 60 minutes typical, 90 minutes maximum

Frequency

Frequency			
	Range	9 kHz to 3.25 GHz	
	Resolution	1 Hz	
Frequency Re	eference		
	Accuracy	±(period since last adjustment X aging rate) + stability over temperature + supply voltage stability	
	Aging Rate	±1 ppm max.	1 year after last adjustment
	Frequency Stability over Temperature	±0.025 ppm	0 to 50 °C
	Supply Voltage Stability	±0.02 ppm	
Frequency Re	adout Accuracy

AC Power Input				
	Power Source	AC 100 V to 240 V, 50 / 60 Hz		
		Auto range selection		

General

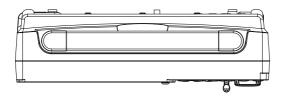

Internal Data	16 MB nominal	
storage		
Power	<65 W	
Consumption		
Warm-up Time	< 30 minutes	
Temperature Range	+5 °C to +45 °C	Operating
	-20 °C to + 70 °C	Storage
Weight	4.5 kg (9.9 lb)	Inc. all options
		(Basic+TG+GPIB+Battery)
Dimensions	210 x 350 x 100 (mm)	Approximately
	8.3 x 13.8 x 3.9 (in)	·

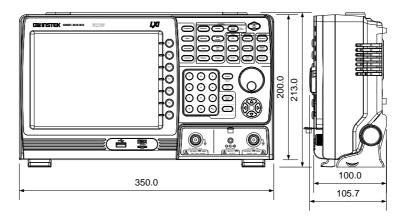

Tracking Generator⁵ (Optional)

Frequency Range	9 kHz to 3.25 GHz		
Output Power	-50 dBm to 0 dBm in 0.5 dB steps		
Absolute Accuracy	± 0.5 dB	@160 MHz, -10 dBm,	
		Source attenuation 10 dB,	
		20 to 30°C	
Output Flatness	Referenced to 160 MHz, -10 dBm		
	100 kHz to 2 GHz	± 1.5 dB	
	2 GHz to 3.25 GHz	± 2 dB	
Output Level	± 0.8 dB	Referenced to -10 dBm	
Switching			
Uncertainty			
Harmonics	< -30 dBc	Typical, output level = -10	
		dBm	
Reverse Power	+30 dBm max.		
Connector type	N-type female		
Impedance	50 ohm	Nominal	
Output VSWR	< 1.6:1	300 kHz to 3.25 GHz,	
•		source attenuation ≥ 12	
		dB	

^[5] The minimum RBW filter is 10kHz when the TG output is ON.
